OPERATIONAL HEALTH

Every Cancellation Is a Three-Way Loss

84.1%

of trips reach their destination

> ⚠ **What the 14.8% really costs**
>
> Each cancelled trip means a rider left without service, a driver who earned nothing, and a platform that collected no fee. Across 30 months, 2,966 cancellations represent up to $106,568 in unrealised revenue — equivalent to 5.5 months of an average city's earnings.

CANCELLATION ANALYSIS

The Problem Has a Root Cause — and Most of It Is Fixable

2,966

Total Cancellations

14.8% of all 20,000 trips

$106,568

Potential Revenue Lost

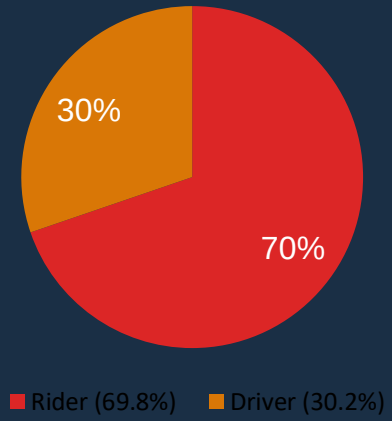

2,966 × avg $35.93 fare

18.4%

Are Preventable

546 wait-related — a system issue

Who Is Cancelling?

Top Reasons — and What They Mean

Personal emergency	396
Unavoidable — focus elsewhere	
Price too high	250
Surge communication needed	
Too long wait	284
FIXABLE — improve ETA accuracy	
Changed my mind	283
Pricing/trust issue — needs UX review	
Waited too long	262
FIXABLE — driver dispatch speed	

REVENUE CONCENTRATION

Surge Pricing Is Working — We Just Need More of It

The Surge Asymmetry

% of Completed Trips

13.1% Surge trips

% of Total Revenue

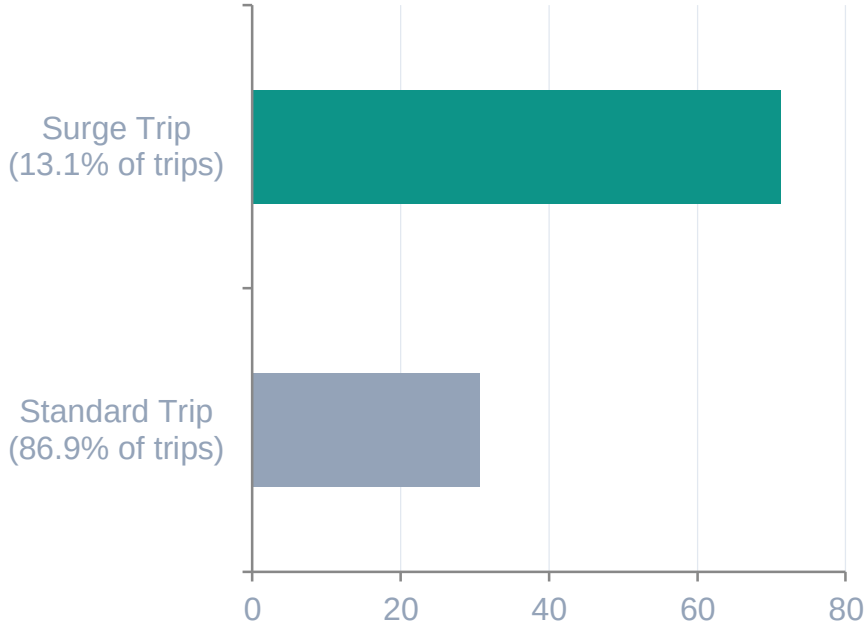

25.9% Surge revenue

133% more revenue per surge trip vs standard

Avg surge trip: $71.27 vs Avg standard trip: $30.61

Same driver, same road — 2.3× the earnings.

Average Fare: Surge vs Standard ($)

RIDER SEGMENTATION

22% of Our Riders Generate 75% of Revenue

75.2%

of all revenue comes from just 352 riders

352 riders

VIP Segment (>$500 spent)

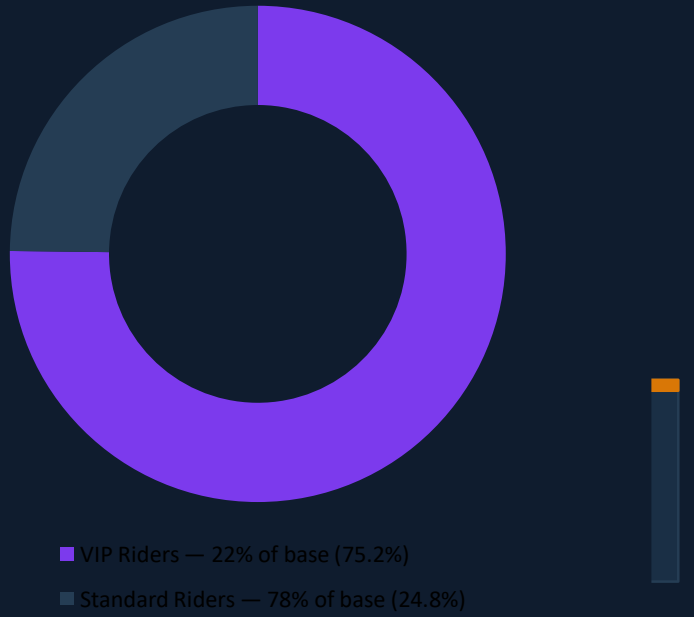

$454,579 total — avg $1,291/rider

1,145 rider

Standard Segment

$150,011 total — avg $131/rider

No loyalty programme exists for this segment yet.

DRIVER PERFORMANCE

Our Busiest Driver Earns 60% Less Per Trip Than Our Best

Highest Earner

Driver #10

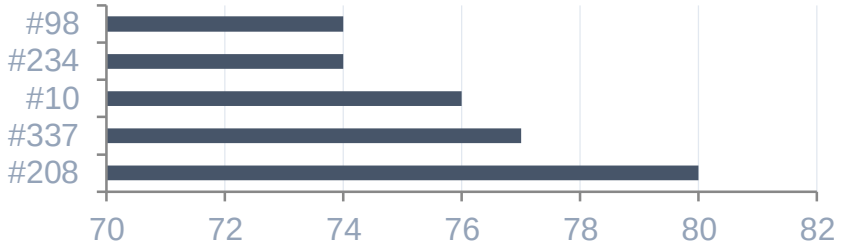

76 trips · $3,680 earned · $48.42/trip

Fewer trips, premium zones, surge demand

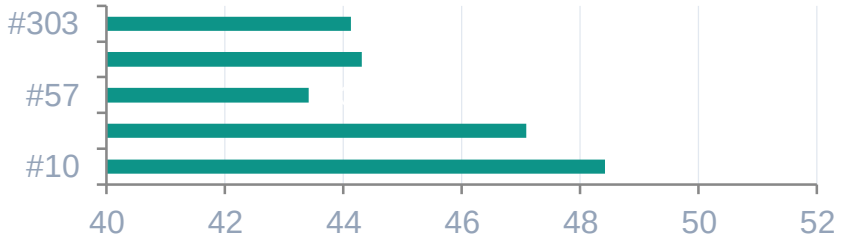

What This Means

The gap is not skill — it's location. High-earning drivers cluster around surge zones and longer-distance pickups. Guiding standard drivers toward these areas through in-app incentives could lift average earnings by 20-30% with zero additional cost to the platform.

Top 5 Drivers — Trips vs Earnings

STRATEGIC ROADMAP

Four Actions to Break Through the Revenue Ceiling

Based on verified analysis of 20,000 trip records — ordered by impact potential

1 Launch a VIP Rider Programme

Insight: 352 riders (22%) generate 75% of revenue ($454K). They have no dedicated service tier.

Action: Priority driver matching, guaranteed ETAs, a loyalty tier with milestone rewards.

↗ Even a 10% retention uplift in this segment protects $45K+ in annual revenue.

2 Expand Surge Zone Coverage

Insight: Surge trips earn 133% more per trip ($71 vs $31). Only 13% of trips currently qualify.

Action: Use location heatmaps to identify unserved high-demand zones, especially IAH Airport ($28K top zone).

↗ Growing surge from 13% to 18% of trips could add $40–60K in annual revenue.

3 Reduce Wait-Related Cancellations

Insight: 546 cancellations cite waiting as the reason — a fixable system issue worth ~$19,600.

Action: Improve driver dispatch speed, add ETA push notifications at 2-min intervals, auto-reassign on delay.

↗ Reducing wait cancellations by 50% recovers ~$9,800 annually and improves rider trust.

4 Guide Drivers to High-Yield Zones

Insight: Top earners make $48/trip vs $30/trip for high-volume drivers — a 60% gap driven by location.

Action: In-app surge heatmap for drivers, incentive bonus for serving designated high-demand zones.

↗ Raising avg driver earnings per trip by 15% lifts overall platform revenue $30–50K/year.
